

DEPARTMENT OF REGULATORY AND ECONOMIC RESOURCES (RER) BOARD AND CODE ADMINISTRATION DIVISION NOTICE OF ACCEPTANCE (NOA)

Mule-Hide Products Co., Inc. 1195 Prince Hall Drive Beloit, WI 53511

#### **SCOPE:**

This NOA is being issued under the applicable rules and regulations governing the use of construction materials. The documentation submitted has been reviewed and accepted by Miami-Dade County RER - Product Control Section to be used in Miami Dade County and other areas where allowed by the Authority Having Jurisdiction (AHJ).

This NOA shall not be valid after the expiration date stated below. The Miami-Dade County Product Control Section (In Miami Dade County) and/or the AHJ (in areas other than Miami Dade County) reserve the right to have this product or material tested for quality assurance purposes. If this product or material fails to perform in the accepted manner, the manufacturer will incur the expense of such testing and the AHJ may immediately revoke, modify, or suspend the use of such product or material within their jurisdiction. RER reserves the right to revoke this acceptance, if it is determined by Miami-Dade County Product Control Section that this product or material fails to meet the requirements of the applicable building code.

This product is approved as described herein, and has been designed to comply with the Florida Building Code including the High Velocity Hurricane Zone of the Florida Building Code.

#### **DESCRIPTION:** Mule-Hide Self-Adhered Roof System over Steel Decks

**LABELING:** Each unit shall bear a permanent label with the manufacturer's name or logo, city, state and following statement: "Miami-Dade County Product Control Approved", unless otherwise noted herein.

**RENEWAL** of this NOA shall be considered after a renewal application has been filed and there has been no change in the applicable building code negatively affecting the performance of this product.

**TERMINATION** of this NOA will occur after the expiration date or if there has been a revision or change in the materials, use, and/or manufacture of the product or process. Misuse of this NOA as an endorsement of any product, for sales, advertising or any other purposes shall automatically terminate this NOA. Failure to comply with any section of this NOA shall be cause for termination and removal of NOA.

**ADVERTISEMENT:** The NOA number preceded by the words Miami-Dade County, Florida, and followed by the expiration date may be displayed in advertising literature. If any portion of the NOA is displayed, then it shall be done in its entirety.

**INSPECTION:** A copy of this entire NOA shall be provided to the user by the manufacturer or its distributors and shall be available for inspection at the job site at the request of the Building Official.

This NOA renews NOA #19-0508.07 and consists of pages 1 through 14. The submitted documentation was reviewed by Alex Tigera.

### **APPROVED ASSEMBLIES:**

Membrane Type:	SBS/APP
Deck Type 2I:	Steel, Insulated
Deck Description:	<ul> <li>18-22 ga. Type B, Grade 33 steel deck fastened 6 in. o.c. with Tek/5 screws to steel supports spaced 5 ft o.c. Deck side laps are attached with Tek/1 screws spaced 20" o.c.</li> <li>This Tested Assembly has been analyzed for allowable deck stress. See Deck Stress Analysis Table.</li> </ul>
System Type B:	Base layer of insulation mechanically fastened, top layer adhered with approved asphalt. Membrane is subsequently adhered to insulation.

#### All General and System limitations apply.

One or more layers of any of the following insulations:

Base Insulation Layer	<b>Insulation Fasteners</b>	<u>Fastener</u>
	<u>(Table 3)</u>	Density/ft <sup>2</sup>
ENRGY-3, ACFoam-II, ACFoam-III, H-Shield, ISO 95+	- GL, Multi-Max FA-3	
Minimum 1.5" thick	1, 2, with 3; 5, 6 with 7	1:1.33 ft <sup>2</sup>

Note: Base layer shall be mechanically attached with fasteners and density described. Insulation panels listed are minimum sizes and dimensions; if larger panels are used the number of fasteners per board shall be increased maintaining the same fastener density (See Roofing Application Standard RAS 117 for fastening details).

Top Insulation Layer	<b>Insulation Fasteners</b>	<u>Fastener</u>
	<u>(Table 3)</u>	<u>Density/ft<sup>2</sup></u>
Structodek High Density Fiberboard Roof Insulation		
Minimum <sup>1</sup> / <sub>2</sub> " thick	N/A	N/A
Fesco Board		
Minimum <sup>3</sup> / <sub>4</sub> " thick	N/A	N/A

Note: Apply top layer of insulation in a full mopping of any approved mopping asphalt within the EVT range and at a rate of 20-40 lbs/100 ft<sup>2</sup>. Please refer to Roofing Application Standard RAS 117 for insulation attachment. Insulation listed as Base Layer only shall be used only as base layers with a second layer of approved top layer insulation installed as the final membrane substrate. Composite insulation panels may be used as a top layer placed with the polyisocyanurate side facing down.

Base Sheet:	One ply of Nail Base, adhered in a full mopping of approved asphalt applied within the EVT range and at a rate of 20-40 lbs./sq.
Primer:	PG 100 or XtraFlex 10.
Ply Sheet:	One or more plies of SA Base Sheet or SA Base Sheet FR, self-adhered.
Membrane:	One ply of SA SBS Cap Sheet, SA SBS Cap Sheet FR, SA-APP Cap Sheet, SA-APP Cap Sheet FR, SA-SBS KoolCap® or SA-SBS KoolCap® FR, self-adhered.
Surfacing: (Optional)	Install one of the approved surfacing products listed in Table 4 to obtain desired coating or required fire classification.
Maximum Design Pressure:	-90 psf; (See General Limitation #7.)

Note: All layers of insulation shall be mechanically attached using the fastener density listed above. The insulation panels listed are minimum sizes and dimensions; if larger panels are used, the number of fasteners shall be increased maintaining the same fastener density. Insulation fasteners shall be tested for withdrawal resistance in compliance with Testing Application Standard TAS 105 to confirm compliance with the wind load requirements. Please refer to Roofing Application Standard RAS 117 for insulation attachment.

Primer: (Optional)	Apply WB-3000 at 1 gal. per 300 sq. ft.
Base Sheet:	One ply of SA Base Sheet or SA Base Sheet FR, self-adhered.
Ply Sheet: (Optional)	One or more plies of SA Base Sheet or SA Base Sheet FR, self-adhered.
Membrane:	One ply of SA SBS Cap Sheet, SA SBS Cap Sheet FR, SA-APP Cap Sheet, SA-APP Cap Sheet FR, SA-SBS KoolCap® or SA-SBS KoolCap® FR, self-adhered.
Surfacing: (Optional)	Install one of the approved surfacing products listed in Table 4 to obtain desired coating or required fire classification.
Maximum Design Pressure:	-82.5 psf; (See General Limitation #7.)

Membrane Type:	SBS/APP
Deck Type 2I:	Steel, Insulated
Deck Description:	18-22 ga. Type B, Grade 33 steel deck fastened 6 in. o.c. with Tek/5 screws to steel supports spaced 5 ft o.c. Deck side laps are attached with Tek/1 screws spaced 20" o.c. This Tested Assembly has been analyzed for allowable deck stress. See Deck Stress Analysis Table.
System Type D.	All insulation is loosed laid with preliminary attachment to deck. Base sheet is subsequently

**System Type D:** All insulation is loosed laid with preliminary attachment to deck. Base sheet is subsequently mechanically fastened through insulation to the roof deck.

#### All General and System limitations apply.

One or more layers of any of the following insulations:

Insulation Fasteners (Table 3)	<u>Fastener</u> Density/ft <sup>2</sup>
<u>(1 able 5)</u>	Density/It
N/A	N/A
<b>Insulation Fasteners</b>	Fastener
<u>(Table 3)</u>	Density/ft <sup>2</sup>
N/A	N/A
N/A	N/A
N/A	N/A
	Insulation Fasteners (Table 3) N/A Insulation Fasteners (Table 3) N/A N/A N/A

Note: All insulation shall have preliminary attachment, prior to the installation of the roofing membrane at a minimum application rate of two fasteners per board for insulation boards having no dimension greater than 4 ft., and four fasteners for any insulation board having no dimension greater than 8 ft.

<b>Base Sheet:</b>	One ply of Nail Base or Nail Base P, fastened to the deck as described below.
Fastening:	Attach base sheet using Dekfast DF-#14-PH3 or Dekfast DF-#15-PH3 fasteners with Dekfast PLT-H-2-7/8 plates, or Mule-Hide HDP Fastener or Mule-Hide EHD fasteners with Mule-Hide 3" Metal Insulation Plates, 12" o.c. in a 4" lap and 12" o.c. in two equally spaced staggered rows in the center of the sheet.
Ply Sheet:	One or more plies of SA Base Sheet or SA Base Sheet FR, self-adhered.
Membrane:	One ply of SA SBS Cap Sheet, SA SBS Cap Sheet FR, SA-APP Cap Sheet, SA-APP Cap Sheet FR, SA-SBS KoolCap® or SA-SBS KoolCap® FR, self-adhered.
Surfacing: (Optional)	Install one of the approved surfacing products listed in Table 4 to obtain desired coating or required fire classification.
Maximum Design Pressure:	-52.5 psf; (See General Limitation #7.)

# **STEEL DECK SYSTEM LIMITATIONS:**

- If mechanical attachment to the structural deck through the lightweight insulating concrete is proposed, a field withdrawal resistance testing shall be performed to determine equivalent or enhanced fastener patterns and density. All testing and fastening design shall be in compliance with Testing Application Standard TAS 105 and Roofing Application Standard RAS 117; calculations shall be signed and sealed by a Florida Registered Engineer, Architect, or Registered Roof Consultant.
- 2. For steel deck application where specific deck construction is not referenced: The deck shall be a minimum 22 gage attached with 5/8" puddle welds with weld washers at every flute with maximum deck spans of 5 ft. o.c.

### **GENERAL LIMITATIONS:**

- 1. Fire classification is not part of this acceptance; refer to a current Approved Roofing Materials Directory for fire ratings of this product.
- 2. Insulation may be installed in multiple layers. The first layer shall be attached in compliance with Product Control Approval guidelines. All other layers shall be adhered in a full mopping of approved asphalt applied within the EVT range and at a rate of 20-40 lbs./sq., or mechanically attached using the fastening pattern of the top layer
- 3. All standard panel sizes are acceptable for mechanical attachment. When applied in approved asphalt, panel size shall be 4' x 4' maximum.
- 4. An overlay and/or recovery board insulation panel is required on all applications over closed cell foam insulations when the base sheet is fully mopped. If no recovery board is used the base sheet shall be applied using spot mopping with approved asphalt, 12" diameter circles, 24" o.c.; or strip mopped 8" ribbons in three rows, one at each side lap and one down the center of the sheet allowing a continuous area of ventilation. Encircling of the strips is not acceptable. A 6" break shall be placed every 12' in each ribbon to allow cross ventilation. Asphalt application of either system shall be at a minimum rate of 12 lbs./sq.

Note: Spot attached systems shall be limited to a maximum design pressure of -45 psf.

- 5. Fastener spacing for insulation attachment is based on a Minimum Characteristic Force (F') value of 275 lbf., as tested in compliance with Testing Application Standard TAS 105. If the fastener value, as field-tested, are below 275 lbf. insulation attachment shall not be acceptable.
- 6. Fastener spacing for mechanical attachment of anchor/base sheet or membrane attachment is based on a minimum fastener resistance value in conjunction with the maximum design value listed within a specific system. Should the fastener resistance be less than that required, as determined by the Building Official, a revised fastener spacing, prepared, signed and sealed by a Florida registered Professional Engineer, Registered Architect, or Registered Roof Consultant may be submitted. Said revised fastener spacing shall utilize the withdrawal resistance value taken from Testing Application Standards TAS 105 and calculations in compliance with Roofing Application Standard RAS 117.
- 7. Perimeter and corner areas shall comply with the enhanced uplift pressure requirements of these areas. Fastener densities shall be increased for both insulation and base sheet as calculated in compliance with Roofing Application Standard RAS 117. Calculations prepared, signed and sealed by a Florida registered Professional Engineer, Registered Architect, or Registered Roof Consultant (When this limitation is specifically referred within this NOA, General Limitation #9 will not be applicable.)
- 8. All attachment and sizing of perimeter nailers, metal profile, and/or flashing termination designs shall conform to Roofing Application Standard RAS 111 and applicable wind load requirements.
- 9. The maximum designed pressure limitation listed shall be applicable to all roof pressure zones (i.e. field, perimeters, and corners). Neither rational analysis, nor extrapolation shall be permitted for enhanced fastening at enhanced pressure zones (i.e. perimeters, extended corners and corners). (When this limitation is specifically referred within this NOA, General Limitation #7 will not be applicable.)
- 10. All products listed herein shall have a quality assurance audit in accordance with the Florida Building Code and Rule 61G20-3 of the Florida Administrative Code.
